The retail environment is changing.

Do you have the most capable hardware, consumables and software to meet evolving consumer and industry trends?
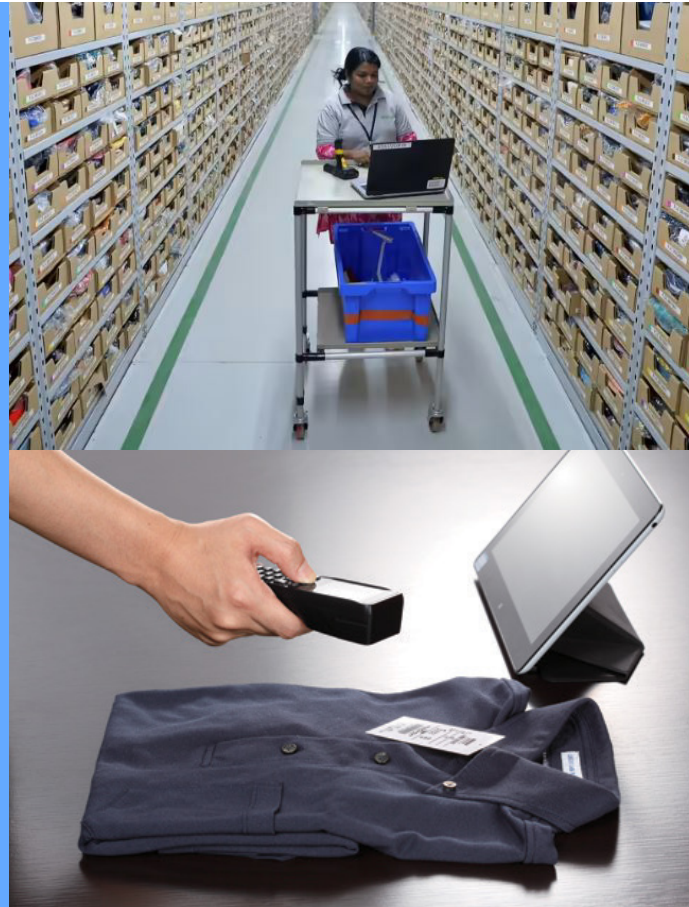

Retail Refresh

Are you in control of your stocktake?

Why is it important to have a good stocktake solution?

Stocktaking is more than counting what you have in stock, it helps you to make decisions on what products to continue supplying, which to discontinue, replace or upgrade, identify non-profitable products, overstocking and slow-moving products.

Use the data from your stocktake to make valuable business decisions, to help you increase profitability and also reduce waste if you are holding perishable goods. Your customers experience will be improved as you are providing them with the best products and ability to serve them better, as a result increasing your sales.

Are you still using pen and paper?

This makes stocktake count vulnerable to human error, is a significantly slower process and is more difficult to interpret and act on the data. Implementing a scanner makes the stocktaking process faster, less expensive and reduces human error.

Is your stocktaking solution capturing data properly to allow you to make the best business decisions?

Ensure you have the best stocktake solution for staff to efficiently and accurately complete their job so staff can quickly complete stocking and focus on their regular duties. For help making a selection and to discuss how to implement a effective solution, contact UMD sales.
